1. Applicant's election of species of the first embodiment in Paper No. 6 (claims 1-6 and 15-24) is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)). However, elected claims 1-6 and 15-24 are directed to two distinct inventions as identified below.

2. Claims 7-14 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 6.

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6, 15-21, drawn to an image processing apparatus and method in which a second information is embedded into image data to represent whether a first embedded information is the latest information in the image data as electronic watermark information, classified in class 382, subclass 100.
- II. Claims 22-24, drawn to image processing apparatus and method in which dithering processing is utilized, classified in class 358, subclass 3.13.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be

separately usable. In the instant case, invention I has separate utility such as image processing system which does not require dithering process utilized in invention II. See MPEP § 806.05(d).

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
